

Realistic Breasts G9 Instructions

Auto Load

Select G9 Female in the scene and load 02-Realistic Breasts G9-Auto-Load.

If you are using Daz 2025+, load 03-Realistic Breasts G9-Auto-Load on Genesis 9.

Shell Fix

When loading more than one geograft on Genesis 9, shell surface conflicts occur. Select each shell in the scene one by one and apply the 05-Shell Fix script. If you're using DAZ Studio 2025+, use 06-Shell Fix DAZ 2025+ instead.

When Realistic Breasts G9 is loaded along with its shell and additional shells included in the product—such as Veins Shell, Scars Shell, and Stretch Marks Shell—as well as another geograft, the Shell Fix script must be applied to all shells in the scene, including:

- Realistic Breasts G9 Shell
- Scars Shell
- Stretch Marks Shell
- Veins Shell
- and any shells from the other geograft

Result

The new Shell Fix script allows Realistic Breasts G9 to be used with any Genesis 9 geograft.

Manual Loading

1. Select Genesis 9 Female in the scene.
2. Load Realistic Breasts G9.
3. Load Realistic Breasts G9 Shell.
4. Load Material Copy.
(If you are using DAZ Studio 2025 or later, load Material Copy DAZ 2025+ instead.)

Materials

To Apply Materials:

1. Select Realistic Breasts G9 Shell in the scene.
2. Load the desired Material Preset.

There are three sets of nipple materials designed to match various skin tones, located in the following folders:

- Nipples 01
- Nipples 02
- Nipples 03

Each set includes material presets that allow you to adjust:

- Glossiness — controls the surface shine
- Opacity — use lower values for subtle blending with the underlying skin, or higher values to reveal more detail and vibrant color.

Scars, Stretch Marks, Veins

The Realistic Breasts G9 product also includes addon shells for:

- Scars
- Veins
- Stretch Marks

These shells can be used individually or together, and are designed to be loaded directly onto Genesis 9, after the Realistic Breasts G9 has been applied.

Each shell has its own Materials folder, located beneath its respective shell folder. For example:

Scars (contains Scars Shell)

└─ Scars Materials (materials load onto the Scars Shell)

Shapes

01-Breast Shapes

1. Select Genesis 9 Female in the scene
2. Load desired Breasts Shape from 01-Breasts Shapes

The Breast Shapes are applied directly to Genesis 9 Female. Each subfolder in the Breast Shapes directory includes a Zero Shape preset to reset any applied morphs.

The shaping presets activate morphs located at:
Genesis 9 → Actor → Chest → DH-Realistic Breasts G9

You can manually adjust the sliders or combine multiple shapes to achieve a custom look that best suits your character.

Note: Using multiple sliders or creating extreme shapes may result in clipping or visual artifacts.

02-Custom Nipple Shapes, 03-Nipples Shapes, 04-Areola Shapes

02-Custom Nipple Shapes contains several pre-made nipple and areola shapes designed for quick scene setup.

03-Nipples Shapes includes shaping presets for the nipples, along with presets for adjusting their scale and height, along with a Zero Shape preset to reset any applied changes.

04-Areola Shapes offers shaping presets for the areola, including options to modify the diameter, and also contains a Zero Shape preset.

The shaping presets found in the following directories:

- 02-Custom Nipple Shapes
 - 03-Nipples Shapes
 - 04-Areola Shapes
- are loading on Realistic Breasts G9.

These presets activate morph sliders located under:

Realistic Breasts G9 → Actor → 01-Nipple
Realistic Breasts G9 → Actor → 02-Areola

Breasts Posing

Realistic Nipples Breasts G9 includes three custom bones per breast for enhanced posing control:

- Left Breast 01, Left Breast 02, Left Nipple
- Right Breast 01, Right Breast 02, Right Nipple

These bones are selectable in the viewport and come with translation and rotation controls, allowing you to move and pose each breast and nipple individually.

Note: Bone limits are deliberately set to a higher range, giving users full freedom to create more dynamic and exaggerated breast poses by combining move, rotate, and scale sliders.

While the system supports natural movement and shaping, it is recommended to pose the chest area with moderation. As this is a geograft-based product, extreme or unnatural deformations may lead to visual artifacts.
